Job Title:	<b>Current Model Product Engineer</b>	ORG Ref. Code:	-																								
Responsible To:	Programme Manager	Supersedes:	-																								
Department/Function:	Engineering	Plant/Location:	Coventry Engineering Centre																								
<b>PURPOSE:</b> <i>Explain why the job exists and what it is intended to achieve.</i>																											
<p>The role exists to assist the Programme manager in the identification, root cause and problem solving of 'Current' build and quality issues for the Interior &amp; Exterior systems for various programmes. The primary role is to develop engineering solutions to solve a wide range of current issues found on vehicles and commodities alike. Support will be given to the individual from both a Programme and CAD Design perspective. The CM Product Engineer determines and drives the most appropriate design and engineering solution for his/her commodities, whilst ensuring the chosen route meets with the full design specification and compatibility to all system attributes and performance targets. This will involve interaction and co-ordination of customer, supplier and internal departments to deliver the system within the quality, cost and timing constraints identified within the programme.</p> <p>The CM Product Engineer is expected to determine and drive the most appropriate design and engineering solution for his/her commodities. At all times controls the engineering design activity assuring most appropriate application of both direct and contract design resources toward a timely and cost effective product design outcome Ensuring that all programme, Manufacturing PPIR/APQP etc.. requirements are satisfied. There is also an expectation to Liaise directly with the supplier base in order to drive changes through the business in order to achieve the overall programme and release timings dictated to by programme.</p>																											
<b>CONTENT:</b> <i>Briefly outline the MAIN duties and responsibilities of the job and describe how they are to be met by giving examples of work required.</i>																											
<ul style="list-style-type: none"> <li>➤ Supervise and collaborate with Engineering, design and other support personnel in order to ensure the Team deliver a robust system in line with the programme targets (cost, quality, weight etc...)</li> <li>➤ Customer/Supplier &amp; Internal direct contact and management.</li> <li>➤ Ensures that the CAD Designers consider: <ul style="list-style-type: none"> <li>○ Design for assembly (DFA).</li> <li>○ Design for manufacture (DFM).</li> <li>○ Quality functional deployment (QFD).</li> <li>○ Finite element analysis data (CAE/FEA) ~ Where applicable</li> <li>○ Dimensional variation analysis (In conjunction with DVA specialist).</li> <li>○ DFMEA/DVP/RMDV Support in order to drive the design and the Team forward.</li> <li>○ Manage and support customer Design Review and Project Meetings as and when required.</li> <li>○ Ensure ALL data leaving the company is checked and approved in accordance with customers design guidelines/rules.</li> <li>○ Monitor and Control Tool &amp; Design Timing.</li> <li>○ Ensures off Tool parts meet the required quality expectations (Contract Dependant)</li> <li>○ Responsible for the engineering elements of customer part approval (PPAP).</li> </ul> </li> </ul>

<ul style="list-style-type: none"> <li>○ Supervise all tool trials, tool sign off and shipping of tools to their respective manufacturing destination (Contract Dependant)</li> <li>○ Ensuring that the process is robust prior to tool shipment (Contract Dependant)</li> <li>➤ Responsible for assisting in the delivery of the design to meet all targets. Ongoing status reviews to be held and results published.</li> <li>➤ Lead and/or support the Programme Manager where appropriate in the delivery of the system objectives and present progress on those objectives at programme reviews including Milestone's and Gateways.</li> <li>➤ Prepare and support both the Programme Manager in the developing and maintaining project-timing plans for all system activities e.g. build support, DVP test plan, Releasing and PPIR.</li> <li>➤ Manages any sourced suppliers or Contracted teams to deliver fully engineered system meeting all Customers engineering and programme targets.</li> <li>➤ Key fact holder for system design and development.</li> <li>➤ Ensure full Failure Mode Avoidance (FMEA) processes are implemented including adherence and ownership of RASIC checklist.</li> <li>➤ Ability to demonstrate understanding of internal metrics including Right first time (RFT) data.</li> <li>➤ Ensure resources are in place to support objectives and assist in determining future resource requirements.</li> <li>➤ Supervise assigned team members, giving technical direction and workload priorities.</li> </ul>							
<b>JOB DIMENSIONS:</b>							
<p>i) Outline the main Policies, Procedures, Schedules, Process, Manuals etc. within which the job is required to operate.</p> <ul style="list-style-type: none"> <li>➤ Lead or Support regular (Weekly) Design reviews with the internal Team as well as customers and nominated TIER suppliers.</li> <li>➤ Lead or support customer meetings where appropriate, ensuring it's adherence to the process and achievement of all targets.</li> <li>➤ Raise progress and lead resolution of concerns.</li> <li>➤ Support both customer and end customers, gateways, other business reviews and the change management process.</li> <li>➤ Support and if necessary lead DFMEA's and FMA processes. Input to manufacturing PFMEA where applicable.</li> <li>➤ Responsibility for completion of DVP test plans both internal and supplier based.</li> <li>➤ Control all design changes in line with programme timing objectives.</li> <li>➤ Management of CAD data leaving the company meets ALL the customers' expectations and protocols. Separate reviews maybe required to constantly monitor RFT and improve on performance.</li> <li>➤ Develop KPI's for CAD data RFT and other customer measurables.</li> <li>➤ Release support responsibility for the system including all hardware, software and trim components</li> </ul> <p>ii) Identify any time constraints, timetables, deadlines etc. within which the job has to operate.</p> <p>100% Engineering releases on time or early.  Operate and work to achieve programme timing – Programme operating within customers guidelines which identifies all builds, Gateways and Design sign off milestones.  Must assist in developing and delivering within the quoted budget.</p> <p>iii) Describe typical problems/ complexities in the job and the type/nature of decisions made or referred elsewhere and to whom.</p> <p>Typical problem would be the discovery of a system component's failure to meet Engineering design target or timing issue to meet pre production builds. Resolution would involve quantifying the magnitude of the issue, identifying root cause, identify containment, and implement permanent corrective actions. Communication to the programme team and management is a vital part of the process. Alternatively, supplier timing plan is not achieved; recovery would involve work rounds, escalation, personal intervention, premium time working etc...</p>

Issuing Department:	Programme Management					
<b>RELATIONSHIPS:</b> <i>Outline the nature of work relationships required of the job and the extent to which influence is necessary.</i>						
	<b>LEVEL OF CONTACT</b>		<b>NATURE OF CONTACT</b>		<b>FREQUENCY OF CONTACT</b>	
Inside Company	From Apprentice Engineer up to Director level.		Presentation of Design status and issues with road-blocks with proposals of actions to resolve issues.		Potentially weekly presentation to Programme Manager & Lead Engineer. Presentation at Gateways as per programme timing.	
Outside Company	From Engineer up to Chief Engineer level, within customers and external partners/ suppliers up to MD		Problem resolution, design content and test programmes. Escalation of timing or cost away from objective		Infrequently as work load requires.	
<b>FINANCIAL DIMENSIONS:</b>						
<ul style="list-style-type: none"> <li>➤ Work closely with the Programme Manager to ensure budget is managed within ALL targets.</li> <li>➤ Assist in determining future budget requirements for cycle plan actions.</li> </ul>						
<b>RESOURCES:</b> <i>Identify the types of Plant, Equipment and/or Company assets that are used in the operation of the job and the purpose for which they are required.</i>						
CATIA V5 Workstation (Programme & Customer Specific) NX (Unigraphics) Workstation (Programme & Customer Specific) MS-OFFICE and MS-PROJECT.						
<b>DEXTERITY &amp; PHYSICAL SKILLS:</b> <i>Describe the intensity of co-ordinating activities or physical actions required in the job. The need for particular sight, touch or manual skills should be identified.</i>						
Willingness to travel, Driving licence, Medical clearance to drive company vehicles, Can do attitude and flexible work ethic.						
<b>WORKING CONDITIONS:</b> <i>Describe the working environment in which the job is required to operate.</i>						
Office based with frequent visits to customers and supplier facilities where necessary. Workshop, test lab, shop floor frequent visits – Health & safety must be observed.						
<b>SUPERVISION:</b> <i>Is the job required to exercise supervision over others? If so then describe the nature and extent of this supervision and the level of influence required to be exercised in the operation of the job.</i>						
<ul style="list-style-type: none"> <li>➤ Support Programme Manager to achieve targets.</li> <li>➤ Support Design team members of all disciplines to achieve set targets.</li> <li>➤ Guide and direct to develop same level and lower rank members.</li> <li>➤ Plan and execute project work for achievement of sub system team targets</li> </ul>
